eInfrastructure for Research and Innovation for STFC

IRIS is a cooperative community brining together (mainly) STFC computing interests

Works closely with STFC but run by the community

https://www.iris.ac.uk/

Formed bottom up by science communities and compute providers

IRIS Science Director is Prof J Hays who is also IRISCAST Project PI

What is **IRISCAST?**

IRISCAST is the **IRIS** Carbon Audit SnapshoT

24 Hour snapshot across multiple 'IRIS Facilities'

The Challenge

Estimate carbon costs for scientific computing across a broad heterogeneous landscape

Identifying the key drivers for carbon costs

Identifying the hurdles and barriers

Communicating the carbon costs to drive change

Working coherently across different communities

The Project

Work together coherently across different facilities with different remits, tooling, and capabilities.

Learn by doing!

Document the gaps, the barriers and the issues, drive requirements for future work and decision making

Communicate across our communities and build a foundation for future action

 $C^p_t = C^p_a + C^p_e$

Carbon Cost (C) for a period (p) is sum of active carbon (a) and embedded carbon (e)

Measure Energy Usage (E) **Obtain Carbon Grid Intensity (CM)**

Inventory of Equipment Obtain Embedded Carbon Estimate Lifetime (L)

Imperial	-	-	-	BMC	IPMI	ipmitool

Comparison of predominant data collection methods at IRISCAST sites. Notably using intelligent Power Distribution Units (PDUs) and Baseboard Management Controllers (BMCs).

Job Level:

Cooling energy usage/PUE generally poorly known

SLURM queues can report Job Energy usage

Turbostat and other RAPL tools?

Energy Vs Power

APC PDU's SNMP query

IPMI query (freeipmi)

IPMI query (ipmitool)

Time Stamped Energy usage is more robust than instantaneous power

For active carbon we need to know about ENERGY usage

PowerNet-MIB::rPDU2DeviceStatusEnergy.1

Hoctowatthour (100 wh) units

APC port n SNMP query / PowerNet-MIB::rPDU2OutletMeteredStatusEnergy.n

ipmi-oem dell get-power-consumption-data

ipmitool sensor list

Probably Power Measurements Energy is better!

PDU	
Vs	
IPMI	

IPMI approx 20% low cf PDU Except at QMUL where 1.5% (APDU9953)

More questions than answers: **Check your calibrations!**

System	Facility (kWh)		
QMUL	1299		
CAM	261		
DUR	8154		
STFC CLOUD	3831		
STFC SCARF	4271		
IMP	944		
Total	18760		

PDU (kWh)	IPMI (kWh)	TurboStat (kWh)	No. of Nodes
1299	1279	1214	118
- 8154	261 6267	-	59 876
-	3831	-	721
4271	3292	-	571
-	944	-	117

Re test at QMUL with AP8459WW per port PDU **20% difference!**

20% difference between APC AP8459WW port measurements and IPMI measurements

Carbon Model

Model a range of scenarios

Measuring computer energy usage is the easy bit.

Computer embedded carbon figures hard to find.

	Scenario			
Factor	Low	Medium	High	
Carbon Intensity (gCO2/kWh)	50	175	300	
PUE	1.1	1.3	1.6	
Server Embodied Carbon (KgCO ₂)	400	-	1100	
Server Lifespan (years)	3	5	7	

			Total carbon footprint estimate (kgCO2)			
			(Perc	entage active cal	rbon)	
	Server embodied carbon	Server lifespan	PUE Low PUE Medium		PUE High	
			Carbon Intensity Low	Carbon Intensity Medium	Carbon Intensity High	
	Low	3	1950 (55%)	5293 (83%)	10186 (91%)	
		5	1600 (67%)	4943 (89%)	9836 (95%)	
		7	1449 (74%)	4792 (92%)	9685 (96%)	
	High	3	3483 (31%)	6826 (65%)	11719 (79%)	
		5	2519 (42%)	5862 (75%)	10755 (86%)	
		7	2106 (51%)	5449 (81%)	10342 (90%)	

Cooling energy usage/PUE less well known.

ed carbon carbon figures even more hard to find.

IRISCAST 24 hour snapshot roughly 1-4 people on 12 hour return Jet

Potential to reduce carbon emissions by an order of magnitude!

IRISCAST Proposes

High Level Feedback Low Level Feedback **Carbon Equivalent Figure of merit Carbon Equivalent** per Job per Job

per month

1. Future DRI procurement to include a score based on embedded carbon costs and equipment energy usage.

2. New computer hardware to include energy measurement capability such as IPMI (or per port PDUs) and require the supplier to provide best estimates of embedded carbon costs.

3. Measure energy used by cooling infrastructure and the computing infrastructure.

4. Facilities to keep an inventory of equipment including embedded carbon cost and idle power draw.

5. Monthly (or other periodic) reporting of carbon usage by facilities based on 3 and 4 above. Roll into standard grant reporting regime.

6. Collect per job (or VM) energy usage by using tools like Slurm (correctly configured). Combined this with embedded carbon from inventory and electricity carbon intensity to feedback job carbon cost to the end user to drive improvements in user code and workflow.

7. Identify user communities and the authors of community codebases so that useful feedback can be given to them to drive the development of more efficient code and workflows.

UKRI DRI Net Zero Scoping Outputs

https://doi.org/10.5281/zenodo.8199984

UKRI DRI Net Zero Scoping Roadmap

https://doi.org/10.5281/zenodo.8199984

Policy and Governance Delivery Partnership

- Review policy areas across UKRI and integrate net zero principles
- Create net zero action plans for DRI facilities
- Develop a timeline for the elimination of onsite fossil fuels

Implement UKRI policy on

conditionalities to reduce

use of contracts and

Implement UKRI policy

heat and recycling of

Establish a financial and

facilitate multi-institution

Mandate carbon reporting

accreditation across UKRI-

legal framework to

collaborations

and sustainable

DRI operations

pathways

Integrate sustainable

career development

computing within DRI

requiring re-use of waste

emissions

hardware.

- Provide training in lowcarbon DRI use to key stakeholder groups
- Develop technical standards for monitoring, evaluation and accreditation for DRI hardware and usage

Establish net zero DRI task-

force from within research

Formalise a map of DRI

environmental impact

resources and their

community

profile

- Adopt standards for Open Science principles and apply across the DRI
- Adopt standards for research practice using DRI
- Ensure training in best practices for low-carbon DRI use
- Establish a centraliesd net zero DRI hub

Competitive Funding

- Run funding calls and research fellowships with a sustainable DRI focus
- Fund research into the influence of usage patterns, hardware and software on Carbon intensity
- Fund research into carbon accounting tools
- Fund research into behaviour change strategies at all levels of the DRI

 Resource and develop carbon emissions tracking capability

- Develop a single DRI interface reporting energy use and environmental footprint per job
- Develop and deploy green schedulers

2024

2028

2030

2040

UKRI DRI Net Zero Scoping Toolkit

- efficiency gains.
- experience.
- the longer term]
- 5.
- extra.

https://doi.org/10.5281/zenodo.8199984

1. Mission Focus: continuous assessment and focus on the mission of achieving sustainability; active measures to counter the risk of enhanced demand negating

2. Recognition of shared responsibility: mandate and empower all staff (from student to CEO) to take proportionate action to drive change and reduce the environmental impact of their work; community building; encourage discussion among colleagues and learn from others to foster positive changes in behaviour.

3. Action-based-research: work must start now with commitment appropriate to the climate emergency while recognising that there will be a need for regular checks and adjustments; focus on progress not perfection; small steps; learn from

4. Work with peers and suppliers: through contracts, conditionalities, and understanding mutual benefits, to develop a low carbon supply chain [essential in

Build and Share Knowledge: providing leadership, support and advice for business cases and large procurements feeding into reporting; central hub for information and institutional knowledge [also likely to create short term results]

6. Green Software Engineering: creating a body of expertise around green software engineering, providing training, developing tools, metrics, expert assessment, and standards to transform current approaches to writing code, and supporting codes running in data centres, such that GSE becomes the norm rather than an optional
